

Help Us Launch the Next Generation Into the Space Industry and join us for an evening with Professor Brian Cox

We've been astounded by the sheer scale and growth of the UK space industry!

From the South West to Scotland, space clusters are thriving. But the workforce pipeline? That still needs attention and we want to make it as diverse as possible!

That's where the innovation lies!

We're seeking £30,000 in funding to create a brand-new, curriculum-linked STEM Box for primary schools, in partnership with Water Rokit. This box will take children on an exciting journey through science, technology, engineering and maths—introducing them to real careers in the UK space sector, right on their doorstep.

Our mission? To inspire children, especially from underrepresented or disadvantaged backgrounds, before age 11, when career aspirations begin to form. And to show them that space careers don't mean becoming an astronaut or moving away—but offer high-value opportunities in engineering, data, logistics, and more in the areas where they live.

We've previously worked with UKRI, the Faraday Institution, Bloodhound Education and UK universities to bring hands-on STEM learning to classrooms. Now, we want to do the same for the space sector—and we'd love your support.

As a funder, you'll:

- Have your branding included in the Box, reaching thousands of pupils and becoming a household name
- Be featured in storytelling that inspires the next generation
- Gain long-term visibility across marketing, PR, and CSR
- Be recognised as a leader in future skills and workforce diversity

If your organisation is committed to tackling the skills gap, driving innovation, and supporting communities, this is the perfect fit. Let's get kids dreaming about space and show them how to land jobs in it. I'd love to talk more if this sounds up your street.

And any funders secured, will be invited to a wonderful event on June 30th, featuring an evening chit chat with Professor Brian Cox in London.
